Chennai, India • +91-9480246319 • guruprasad4790@gmail.com

SUMMARY

Technical Lead with 14+ years of experience in distributed systems and real-time telecom platforms. Experienced in designing and evolving system components, improving reliability and maintainability, and leading teams through complex problem-solving. Strong background in debugging, cross-component analysis, and delivering stable systems in production environments.

CORE SKILLS

Languages: C++, Python, SQL, Shell

Systems: Distributed Systems, Real-Time Processing, Linux

Protocols: IMS, SIP, Diameter

Tools: Redis, Docker, Jenkins, Git

Practices: System Design, Debugging, Incident Handling, System Stability

PROFESSIONAL EXPERIENCE

Technical Lead — Xoriant (Cisco UCSM) Aug 2024 – Feb 2026

- Led debugging and resolution of defects across server and networking components, including regression issues from feature integrations.
- Performed live debugging in complex systems to identify root causes across component boundaries.
- Investigated system instability and supported resolution of production incidents.
- Led a team of 9 engineers, driving issue resolution and coordinating cross-team fixes.
- Contributed to improving system stability during maintenance and release cycles.

Independent Project — Execution and Delivery Mar 2026 – Apr 2026

- Executed a time-bound on-site project involving diagnosis and rebuild of a lime-based wall system, coordinating across multiple stakeholders to meet fixed deadlines.

Senior Software Engineer — Cloudtern (Pareteum MVNE) Dec 2020 – Apr 2024

- Designed Redis-based session handling to enable stateless processing in real-time systems, improving scalability and maintainability.
- Improved system flexibility through JSON-based configuration management.
- Diagnosed and resolved defects in billing and session handling systems.
- Built REST-based mechanisms for dynamic configuration updates in running systems.

Technical Lead — HCL (Cisco / Synamedia) Nov 2018 – Jul 2020

- Redesigned a processing system to reduce AWS storage and request overhead.
- Provided on-call support and resolved high-priority issues in live environments.

R&D Engineer — Nokia Networks (IMS Core Platform) Aug 2014 – Oct 2018

- Developed and enhanced charging-related features within a large-scale IMS core system, working across CSCF components.
- Implemented protocol-level features including location tracking and access class updates.
- Improved system efficiency by redesigning processing logic.

Software Engineer — CSG International (Singleview) Oct 2013 – Aug 2014

- Maintained telecom billing systems and resolved defects in production environments.

R&D Software Engineer — Aricent (ComverseONE) Sept 2011 – Oct 2013

- Enhanced Diameter modules and implemented charging features for telecom services.

EDUCATION

B.E. Computer Science and Engineering 2011

Sir M. Visvesvaraya Institute of Technology
